

ROSHANI KAMBLE

Frontend & Full Stack Developer | Blockchain/Web3 Developer | AI/ML
+91 9307312497 · roshanikamble2002@gmail.com · LinkedIn · GitHub · Pune, Maharashtra

PROFESSIONAL SUMMARY

M.Sc. Blockchain Technology candidate with hands-on experience across **Frontend Development, Full Stack Development, Blockchain/Web3, and AI/ML**. Skilled in building responsive web applications and AI-powered systems using **React.js, JavaScript, TypeScript, HTML, CSS, Tailwind CSS, Python, FastAPI, Django, Flask, and REST APIs**, with practical exposure to **Solidity, Ethereum, smart contracts, EVM, decentralized identity, NLP, LLMs, RAG, OCR, and computer vision**. Focused on developing user-centric software products that combine **modern frontend engineering, Web3 technologies, and AI-driven solutions**.

EDUCATION

MIT World Peace University (MIT-WPU) <i>M.Sc. Blockchain Technology</i>	Jul 2025 – Present <i>Pune, Maharashtra</i>
Savitribai Phule Pune University <i>BBA (Computer Applications)</i>	Jul 2022 – Jul 2025

EXPERIENCE

Web3 & Blockchain Development Trainee <i>MIT World Peace University</i>	Aug 2025 – Present <i>Pune, Maharashtra</i>
---	--

- Developed practical understanding of blockchain architecture, decentralized identity, smart contracts, and Web3 application workflows.
- Explored Ethereum, Solidity, EVM concepts, decentralized identity, DeFi, cryptographic hashing, and blockchain-based verification.
- Worked with Web3-oriented application concepts and explored frontend integration with decentralized technologies.

SELECTED PROJECTS

VeriTrust AI Framework – Trust Intelligence Platform	<i>AI / Blockchain / Full Stack</i>
---	-------------------------------------

- Designed a modular Trust Intelligence Platform for high-risk document analysis and decision support, beginning with insurance policies and designed for future expansion to other document domains.
- Designed the workflow from authentication and document upload through OCR, AI understanding, Explainable AI, clause analysis, Risk Score, Trust Index, recommendations, blockchain verification, immutable audit trail, and dashboard analytics.
- Architected a model-agnostic AI layer using OCR, LangChain, RAG, Gemini/Ollama and a dedicated blockchain trust layer for document integrity verification.
- Designed blockchain verification using SHA-256 document hashing, timestamps, and verification metadata rather than storing complete documents on-chain.

Technologies: React, TypeScript, Tailwind CSS, FastAPI, Python, PostgreSQL, FAISS, OCR, LangChain, RAG, Gemini, Ollama, Solidity, Hardhat, Ethereum Sepolia, JWT, RBAC, Docker

Nyay AI – AI Legal Assistant for Indian Law	<i>AI / LLM / NLP</i>
--	-----------------------

- Developed an AI legal-assistance application for answering questions related to Indian law through conversational interaction.
- Built a Python Flask backend powered by the LLaMA 3.1 8B language model and implemented conversational context handling for follow-up questions.
- Applied LLM and NLP concepts to create context-aware responses rather than isolated question-answer processing.

Technologies: Python, Flask, LLaMA 3.1, LLM, NLP

AI Resume Analyzer – Intelligent Resume–Job Matching	<i>AI / NLP / Machine Learning</i>
---	------------------------------------

- Built an AI-based system that analyzes resumes against job descriptions and identifies matching and missing skills.
- Used RoBERTa, a transformer-based language model, to evaluate semantic similarity between resumes and job requirements beyond basic keyword matching.

Technologies: Python, RoBERTa, NLP, Machine Learning

Smart Gallery – AI-Based Image Organization System	<i>AI / Computer Vision / Web</i>
---	-----------------------------------

- Developed a web application that automatically identifies and groups images containing the same person using face-recognition technology.
- Integrated computer-vision processing with a Django web application and database workflow for image and face-data management.

Technologies: Python, Django, Face Recognition, Computer Vision, Database

TECHNICAL SKILLS

Frontend / UI	React.js, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS, Responsive Web Development, UI/UX
Web / Full Stack	Python, FastAPI, Django, Flask, Node.js, REST APIs, PHP, Laravel
Blockchain / Web3	Blockchain, Ethereum, Ethereum Sepolia, Solidity, Smart Contracts, EVM, Web3, Decentralized Identity, DeFi
AI / ML	Python, Machine Learning, Deep Learning, NLP, RoBERTa, LLMs, RAG, OCR, Computer Vision, Face Recognition
Databases	PostgreSQL, MySQL, SQLite, MongoDB
Tools / Technologies	Git, GitHub, GitLab, VS Code, Docker, D3.js, Hardhat, LangChain, FAISS
Core Areas	Frontend Engineering, Full Stack Development, UI/UX, Blockchain Development, Web3, AI/ML, Software Development

ADDITIONAL PROJECT EXPERIENCE

- Developed web applications including Banking System, Hospital Management, Blog Website, Online Tiffin Service, BookShop, Hotel Booking, Doctor Appointment, Online Voting, Home Rental, Library Management, Vehicle Breakdown Assistance, and Lawyer Management systems using Django, PHP, Laravel, and MySQL.
- Explored AI/ML applications including Chat-with-PDF RAG, Text-to-Image Generation, CNN-based Image Classification, Vehicle Number Plate Detection, Emotion-Based Music Recommendation, Movie Recommendation, Salary Prediction, and Mood-Based Food Recommendation.

ACHIEVEMENTS & ACTIVITIES

- Winner – E.D.G.E. Mini Project, MIT-WPU:** Developed a blockchain-based identity management solution for secure digital identity sharing.
- Participated in hackathons and technical events focused on Blockchain, Web3, AI/ML, and software development.

CAREER INTEREST

Target Roles: Frontend Developer Intern / Frontend Engineer Intern / Full Stack Developer Intern / Web3 Developer Intern / Blockchain Developer Intern / Software Development Engineer Intern / AI/ML Intern

Preferred Location: Bangalore / Bengaluru
